

Witsmith

The contract your coding agent did not know it needed

Team Witsmith

Cursor Hackathon

May 9, 2026

Your agent just got prompt-injected. Witsmith caught it, rolled it back, and patched its own permission file.

Meet Smith

Smith reads every file in the repo, including the ones with instructions in them.

The Loop

Contract → action → failure → recovery
→ amendment → contract.

The Wow Moment

Live AGENT_WIT.yaml diff

```
ask:
  - pattern: "rm -rf*"
+ - pattern: "*prisma migrate*"
+   # auto-added after Smith dropped users.email
+   # see .witsmith/handoffs/0042-smith-strikes-again.md
```

Smith failed. The policy changed outside the agent. Smith cannot make the same mistake twice.

Free your Smith.

Witsmith is open source.

Replace this with the final repo URL:

<https://github.com/your-org/witsmith>
